Directorate I - Environment
Management of natural resources

Brussels, 9 July 2010
I.4/ATC D(2010)

Dear Project Coordinator,

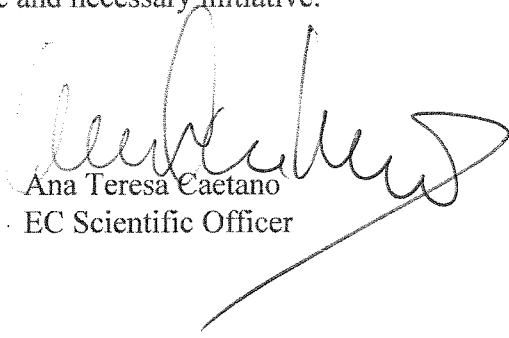

The 7th Framework Programme support action **MarineTT** – European Marine Research Knowledge Transfer and Uptake of Results – is part of a package of initiatives launched by the FP7 Theme Environment in 2009, with the aim to promote better communication strategies and innovative approaches for the dissemination and uptake of research results in the area of the marine environment.

MarineTT intends to analyse 6th and 7th FP RTD projects in order to identify high potential “knowledge outputs” for different target audiences. Where high potential outputs are identified MarineTT will then design and carry out targeted knowledge transfer activities to ensure end users receive and use the outputs. Therefore within the project MarineTT knowledge transfer experts could be helping to transfer your research efforts and measure the impact of such transfer, thereby further justifying the initial EC investment in the project.

Marine TT is expected to contribute to: improve the access to EU research results for industry, multipliers, the civil society and policy-makers; to increase cross-sectoral and cross-thematic analysis and up-take of results and; to increase visibility and uptake of EU S/T results, data and analysis in the economy and the society, including in policy design and implementation.

For MarineTT to be able to do their job effectively they need your assistance as a **project coordinator** to first identify and highlight the main outputs from your project. Therefore the European Commission would greatly appreciate your assistance to the MarineTT partnership by completing this survey.

Thank you in advance for your support of this worthwhile and necessary initiative.

Ana Teresa Caetano
EC Scientific Officer
